

Tecniplast GYM500 is an enrichment specifically designed to promote mice activity in Individually Ventilated Cages. As stated in most guidelines and directives for use of laboratory animals, environmental enrichments increase not only physical activity, but also the expression of natural behavior patterns. In addition, the use of fit animals may reveal novel mechanisms by which exercise affects basic biological processes and disease pathogenesis.

Suitable for GM500 and GM500 Plus, **GYM500 can be used inside the home cage.**

ANIMAL WELFARE

- Environmental enrichments are important to promote positive behavior patterns, such as exploring, hiding, foraging and running.
- Enhancing locomotion, **GYM500 increases physical health and cognitive activity, reducing anxiety.**

VERSATILE AND EASY TO USE

- **GYM500 features a tool-free installation:** operators can easily place and remove it.
- GYM500 is suitable for clockwise and counter clockwise rotation and **fits on both long sides of the cage.**
- Reliable materials and robust design allow repetitive washing and autoclaving cycles.
